

PhonePe Transaction Insights Dashboard

Introduction

This project is about analyzing PhonePe transaction data.

In this project, I used Python, SQL, Streamlit, and visualization libraries to analyze transaction data, user data, and insurance data.

I created charts, maps, and a dashboard to understand how users use PhonePe in different states.

Objective

The main goals of this project are:

- To analyze PhonePe data
- To understand user activity
- To identify top-performing states
- To study insurance growth
- To build a Streamlit dashboard
- To generate business insights

Technologies Used

- Python
- SQL
- Streamlit
- Pandas
- Plotly

- Matplotlib
- SQLite

Dataset

I used the PhonePe Pulse dataset.

The dataset contains:

- Transaction data
- User data
- Insurance data
- State and district data

The data is organized by year and quarter.

Steps in the Project

1. Collected the dataset
2. Cleaned the data using Python
3. Stored data in SQLite database
4. Wrote SQL queries
5. Created charts and maps
6. Built Streamlit dashboard
7. Generated insights from the data

Business Case Studies

1. Transaction Analysis

This analysis shows transaction activity in different states.

Insights

- Maharashtra has high transaction activity.
- Southern states use more digital payments.
- Transactions increased every year.

2. Device Analysis

This analysis shows which mobile brands are mostly used.

Insights

- Android devices are mostly used.
- Some devices have lower user activity.

3. Insurance Analysis

This analysis shows insurance transaction growth.

Insights

- Insurance usage increased.
- Some states still have low insurance usage.

4. Market Expansion Analysis

This analysis identifies regions with high growth.

Insights

- Metro cities have high transaction amounts.
- Some districts are growing fast.

5. User Registration Analysis

This analysis studies user registration growth.

Insights

- User registrations increased.
- Southern states have strong digital adoption.

Dashboard Features

The dashboard contains:

- India map
- Bar charts
- Donut charts
- Line charts
- Sidebar filters
- Business case study section
- Insights section

Visualizations Used

- Bar Chart
- Donut Chart
- Line Chart
- India Map

Key Insights

1. Maharashtra has high transaction activity.

2. Insurance usage is increasing.
3. User registrations are growing.
4. Metro cities use more digital payments.
5. Merchant payments are high.
